

HUDSON

MACHINE & TOOL

TURNING

Hudson Machine & Tool offers precision CNC turning on our horizontal and vertical CNC lathes. Our Swiss lathes ensure a high level of precision and production paired with a 12' bar feed capacity.

OUR SERVICES

We will select the best lathe for your custom CNC turning needs and part design. Our cell production turning and live tooling lathes allow us to minimize costly set-ups and operations. These innovations give us the ability to further pass the savings in time and cost on to you, all without reducing quality. Hudson operates both bar feed and manually loaded machines to accommodate your part design, large volume, or small volume production run lot sizes.

Our experienced production team designs a process flow that utilizes our inventory of lathes to make sure you get the most cost-effective part in the least amount of time. We have the capacity to work with 12' bar lengths in our bar feed operations and parts 14" diameter by 32" length in our manually loaded lathes.
